

Nulogy Software for 3PLs

With Nulogy, transform your value-added
co-packing into a competitive advantage.

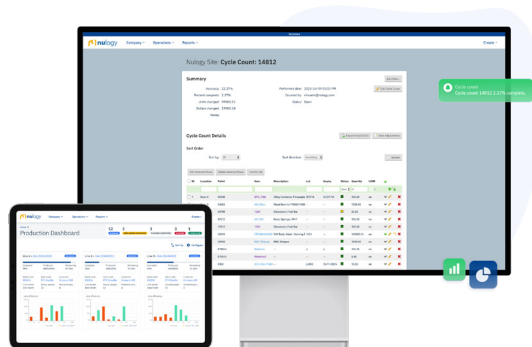

The Only Co-Pack Software for 3PLs

As a logistics provider, you manage a wide variety of value-added services (VAS) to attract customers and grow your business. Your co-packing department can generate significantly more revenue, but is pressured to meet specific product requirements and customisation capabilities in order to serve a diverse range of brand customers.

When equipped only with spreadsheets, ill-fitting ERPs, or homegrown systems, your co-packing will struggle to manage growth challenges such as increasing SKU complexity, greater labour requirements, and evolving equipment and production line needs.

Nulogy's software for co-packers is built to solve the problems your operations face every day. With Nulogy, your co-packing operation can run faster, better, and more efficiently, keeping labour costs down and generating stronger margin performance.

Proven Results

For more than 20 years, Nulogy has helped value-added logistics providers thrive and excel.

60+%

Reduced data corrections and revisions

10%

Increased performance within 12 months

50%

Increased response times to recall

KinaXia Logistics

Benefits

Improve Shop Floor Control

- Evolve past spreadsheets and reliance on key personnel
- Gain real-time visibility for in-production inventory
- Capture shop floor data for stronger decision-making
- Respond to recalls and other quality issues in minutes instead of days

Increase Responsiveness

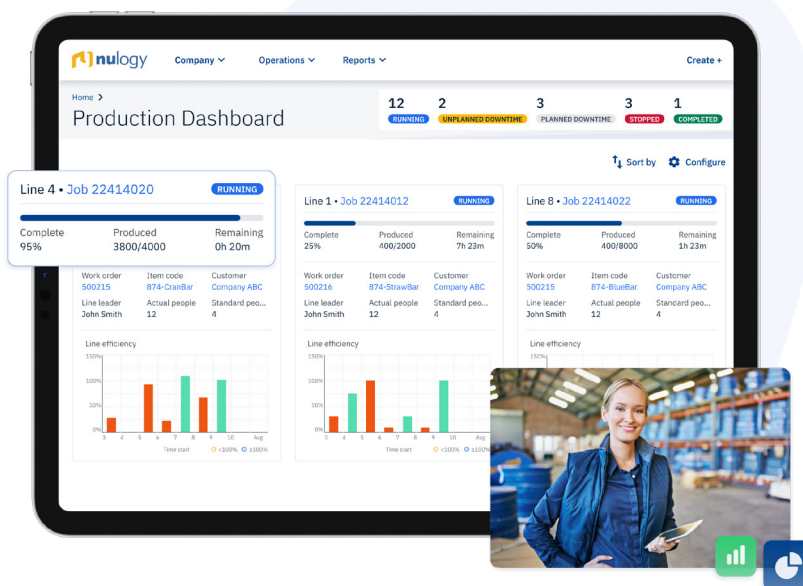

- Efficiently manage and schedule demand across all your customers
- Respond quickly to rush or change orders
- Provide real-time status updates to clients
- Capture and share data from your existing ERP system

Enhance Quality and Traceability

- Streamline and enforce quality control processes, helping save time and prevent errors
- Easily retrieve records for faster reviews, audits, and other traceability-related processes
- Configure electronic signature requirements for inspections

Improve Margins

- Optimise materials planning and reduce Capex
- Maximise line utilisation
- Increase capacity without adding costs or additional labour
- Reduce waste during production

"Nulogy's industry-specific focus and innovative technology through its cloud-based solution and user-friendly interface made it stand out from other software solutions, and is an excellent fit for CEVA's digitalization strategy."

Gülşah Gebecik, BPE System Development Engineer, CEVA Logistics

Nulogy Powers Your Entire Co-Pack Operation

COSTING

Quickly generates accurate estimates on expected order-related costs as well as invoices directly from production or shipments, enabling you to respond faster to customer requests with less effort.

PRODUCTION SCHEDULING

Introduces an intuitive, drag-and-drop based interface to quickly visualise and optimise your production schedule based on factors such as current demand, required equipment, run rates, and more.

MATERIALS PLANNING

Proactively plans the procurement WIP and ingredients based on factors such as current demand, consumption, scrap rates, lead times, inventory levels, and outstanding orders—ensuring the right inventory at the right time.

WAREHOUSE MANAGEMENT

Enables real-time inventory visibility with warehouse guidance and system verifications to improve inventory control and accuracy, while delivering lot traceability for quick and accurate recalls among other critical warehousing functions.

PRODUCTION MANAGEMENT

Digitalises shop floor processes and generates real-time dashboards for line efficiency and performance metrics to bolster throughput, reduce costs, and unveil valuable insights.

DIGITAL QUALITY INSPECTIONS

Digitalises quality inspection sheets on tablet devices, with e-signatures and audit trails to streamline and enforce quality control processes. Save time, prevent errors, improve traceability and release products faster.

REPORTING

Automate and combine reports from Nulogy for advanced analytics and tracking. Using data extracted from Nulogy, leverage BI tools to help spot trends and patterns in your operations.

CONNECT

Connect with any in-house application or partner system to consolidate critical production data into a consistent data model. Synchronise on order status, inventory availability, network capacity and more.

"The implementation of Nulogy was a great success. We had a lot of support from the Nulogy team. They came on-site very early on to offer scoping sessions and understand our needs and requirements...The team was just fantastic. They were able to support us with everything we needed."

Thomas Sleg, Customer Solutions Manager, Kinaxia Logistics
